# Get-Synopsis

- What is an Azure Static Website
- How do we interact with a REST API
- What is an Azure Function
- Profit??

# Get-Definition -Name Static Website

- You can serve static content (HTML, CSS, JavaScript, and image files) directly from a storage container named \$web. Hosting your content in Azure Storage enables you to use server-less architectures that include Azure Functions and other Platform as a service (PaaS) services.

# Get-Definition -Name REST APIs

- We'll use Invoke-RestMethod
- RESTful Web services allow the requesting systems to access and manipulate textual representations of Web resources by using a uniform and predefined set of stateless operations.

# Get-Definition -Name AzFunction

- Azure Functions are small pieces of code triggered by a specific event, constructed as small functions. Just as you would when creating modular programs in a “legacy” way.

# Big Reveal....
